

# Achieve situational intelligence with voice services for security teams

Ensuring safety and security in dynamic and unpredictable operations is challenging, coupled with ever-multiplying complexity and cost. Security organizations also need to automate personnel accountability and activity reporting so they can operate more effectively.

Orion enterprise voice services enable security teams to rapidly scale operational range and effectiveness for staff locations. Connect with teams anywhere via push-to-talk (PTT), track asset and staff location, generate quality reporting, and interoperate with legacy solutions — while increasing productivity and personnel accountability.

**SITUATIONAL INTELLIGENCE**

**RADIO INTEROPERABILITY**

**UNLIMITED RANGE**

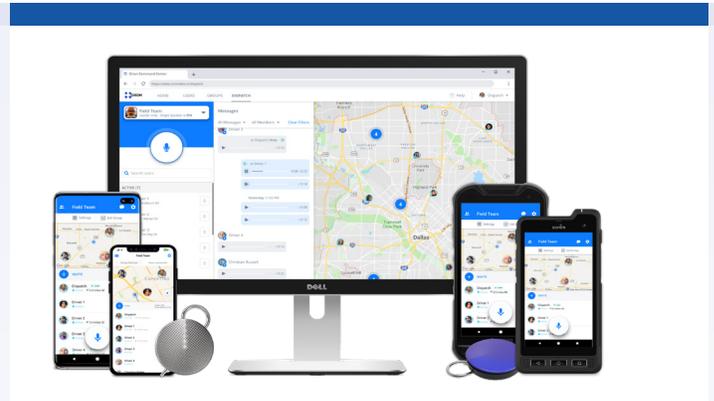

**LOCATION TRACKING**

## Secure, real-time communication with unlimited range

Enable your teams to connect anywhere, over any distance, with Orion. Maintain covert and secure operations with low latency, high audio quality, and strong encryption.

## Built for interoperability with breadth of device support

Orion supports the devices your workforce requires, including rugged form factors. Add Orion to devices you're already using, and add more if needed.

# Voice-Activated Business Automation for Security Teams

Orion AI Workflows are software integrations and automations that help your team do more with voice. AI Workflows are easy to use — simply speak, and Orion gets it done. Security teams use AI Workflows to improve activity reporting and protect team members who work alone.

### Daily Activity Report (DAR)

Increase situational awareness for your organization. Enable officers to document their observations while staying heads-up and safe.

### Emergency Alerts

Enable your team to call for help, no matter where they are. When an emergency phrase is spoken, Orion alerts safety teams with important location data.

### Lone Worker Reminders

Help team members when they can't call for help. Orion checks in with solo staff periodically and sounds alarms when workers can't answer.

## 85% of teams want to use voice tools at work

— CMG Partners Survey, 2018

### What our customers are saying

“At a past event, we tested the LTE connected solution from [major radio vendor], and nobody on the team wanted to use it. When we deployed Orion's enterprise voice and advanced location services at our biggest annual event, we saw a huge difference in adoption. Our teams enthusiastically adopted Orion, and we immediately expanded our use beyond the original scope.
